

Anti-theft marking

What is Anti-Theft Marking?

Anti-theft marking is a simple and secure theft deterrent that has been proven effective. In fact this technique has been used for hundreds of years by cattle owners. By marking their herd with a hot branding iron they could easily identify their stock and recover stolen animals. Don't worry! We will not use this technique on your car. We will use the best technique available which is sand blast marking. While we are still constantly watching for new and innovative ways to improve our product, sand blasting remains the norm. A unique code is permanently etched and is extremely hard to hide or remove without seriously damaging the aesthetics or the part. In fact, the would-be thief would have a very hard time to sell the parts and the selling price would not make it worth the trouble.

Advantages for the customer

Like all security devices, Anti-theft marking is a necessary pain. The immediate benefit in general is a reduced insurance premium for theft. But there's more. Often Anti-theft marking will make a basic electronic alarm system obsolete.

Imagine yourself when leaving the shopping center on a Saturday afternoon or worse, while you are on vacation with your family and realizing your car AND it's contents has been stolen with the accompanied trouble and grief. In most cases when your car is stolen, your insurance company may not cover your full loss (depending of your coverage type) and give you only an amount that might not cover the purchase of a vehicle that is similar to the one you owned. Finally your insurance premiums may increase significantly when your vehicle is stolen.

Otoprotect Inc's Anti-theft marking system

Otoprotect Inc's anti-theft marking uses a sand blast technique through a lexan stencil. Our unique ultra compact system with custom tip is extremely easy to handle and makes the installer's job quick and easy. Our system produces clean and aesthetically pleasing markings with minimal use of a manual electric engraver. The warning stickers that are applied on the side windows identify your car as a non profitable theft and make thieves walk away.
